

# erwin® Business Process (BP) powered by Casewise

## AT A GLANCE

erwin BP is a business processes modeling and analysis platform for visualizing business processes, system interactions and organizational hierarchies. With these insights, you can clarify roles and responsibilities, increase productivity, reduce errors and mitigate risks to achieve strategic objectives. Identify staff who function as “unofficial data repositories,” capturing this tribal knowledge quickly and effectively so it can be transferred to the next generation, while also identifying where expertise may need to be bolstered. Improve existing processes or design new process flows, eliminating unnecessary or contradictory steps, and document results in a shareable format that is easy to understand.

## KEY BENEFITS/RESULTS

- Ensure regulatory compliance and guard against penalties and reputational damage by documenting and sharing processes with employees, plus demonstrate corporate controls and streamline audits.
- Facilitate enterprise collaboration with integrated business models for a single source of truth but with different views based on specific stakeholder needs.
- Improve processes by analyzing existing ones to identify gaps, inefficiencies and redundancies for outcome-driven business changes.
- Increase employee education and awareness by ensuring they know where to find established business processes and can apply them to their roles.
- Retain institutional knowledge by capturing, documenting and publishing information for key functional areas.

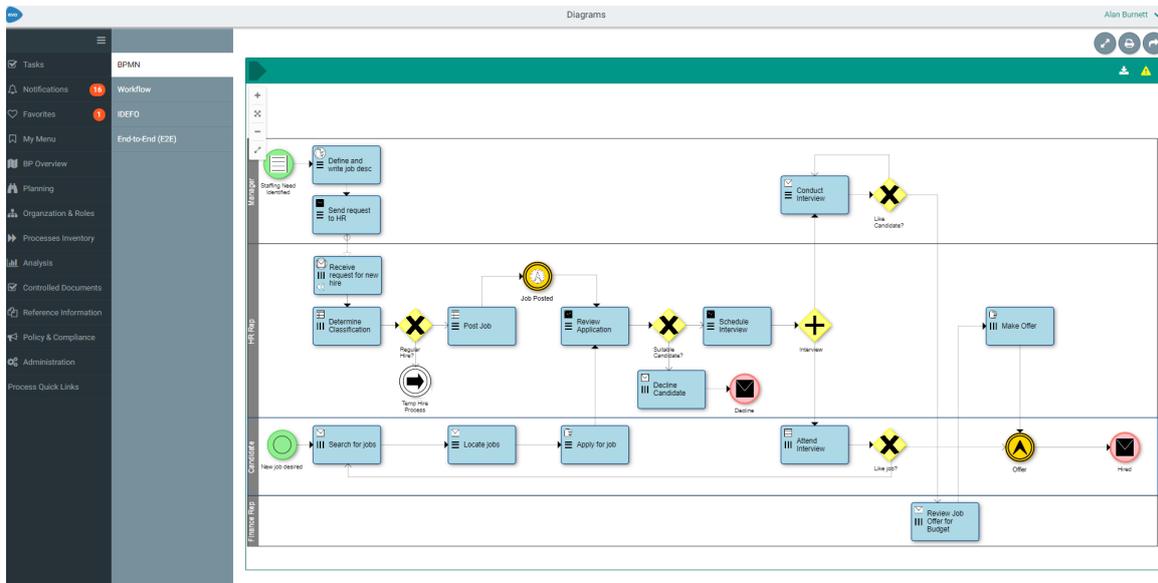

## KEY FEATURES

- Enterprise-strength central repository
- Easy-to-use web interface accessible on any device
- Publish and share your models through the web portal, Word or PDF documents
- Integration with other erwin and third-party tools to enable wider modeling and analysis
- Manage model access, including reading and editing rights
- Impact analysis
- Social features such as discussion threads and surveys

## SOLUTION OVERVIEW

erwin BP provides powerful business process modeling. These are its key features:

- **Business process modeling and analysis** — Visualize processes and all the associated data for a clear picture of workflows, inputs and outputs to address areas for innovation, improvement and/or reorganization.
- **Central repository** — Develop and capture multiple artifacts in one place for easy access, analysis and management.
- **Configurable platform** — The frameworks, notations, views and user interface can be customized to suit all stakeholder needs. Information also can be added to the metamodel to refine such out-of-the-box properties as cost, time and resources.
- **Reporting and publication** — All models and views can be reported on and published via PDF, HTML and text-based reports.
- **Impact analysis** — See how changes to business process models will affect day-to-day operations and impact strategic objectives to ensure the best results.
- **Collaboration** — Use discussion threads, surveys and other social features to collaborate across functions as well as the larger enterprise.
- **Audit capabilities** — All changes to models can be audited, traced back to those who made the adjustments.
- **Data import** — Import data from external sources to kick-start business process modeling initiatives.
- **User management** — Role-based access control ensures users can only view and edit parts of the model relevant to them.
- **Access on any device** — The user-friendly web interface can be accessed from any device, including tablets and phones.
- **Integrations** — APIs allow integrations with other erwin solutions as well as third-party tools.

erwin BP provides stakeholders with an easy-to-use graphical interface to model, analyze and share business processes.

## CRITICAL DIFFERENTIATORS

- **Full-featured and easily configured** — Model and analyze business processes with links to data, applications and other aspects of your organization.
- **Centralized repository** — Ensure your organization retains all process-related knowledge, providing a central source of truth for all stakeholders.
- **Role-based views** — Develop integrated business models for a single source of truth but with different views for different stakeholders based on their needs. Cross-functional and enterprise collaboration is possible through discussion threads, surveys and other social features.
- **Business and IT infrastructure interoperability** — Integration with erwin’s data cataloging, data literacy and other enterprise modeling software creates a data governance platform that facilitates strategic IT and business collaboration in driving actionable insights, agile innovation, risk management and business transformation.
